

WWI GREEN Asphalt Sealant & Protection

THE ULTIMATE NON-COAL TAR TREATMENT AND PROTECTION SYSTEM

WWI Green Asphalt Sealant & Protection is an asphalt based sealer and internal treatment for asphalt pavements. It is engineered using a special blend of oxidized asphalt binder that is UV stable and very rich in aromatic compounds and modified with several moisture-insensitive silicone based compounds that have multifunctional active groups.

ADVANTAGES AND BENEFITS

- Ready to use and cold applied, dries fast and thermally stable.
- Eliminates damage caused by extreme temperature cycles.
- Low viscosity allowing for deep penetration through capillaries and voids. Permanently seals voids and capillaries providing internal waterproofing and moisture blocking mechanism from positive and negative sides.
- Enhances bond properties between pavement elements thus eliminating surface deterioration chipping and crack formation.
- Increases stability of asphalt pavement and resistance to deformation.

FIELDS of APPLICATIONS

ASP can be used as treatment and protection for all kinds of asphalt pavements.

However, it is ideal and cost effective for all asphalt pavements in:

Roads & Highways · Airport Taxiways · Bridges & Tunnels

Commercial Parking Lots (*Restuarant, Condo & Apartments, Shopping, Resort*)
